

Notes:

ON/OFF refers to the checked/unchecked status of the 'Synchronize Data Files' preference found under *Customize-Preferences-Database*.

EDF refers to the 'External data file directory' setting found in *Customize-Preferences-Other*.

**Server to Client:** this table displays the end result at the client database when an item with data file is synced from server to client.

	Server (OFF)	Server (ON)
Client (OFF)	Path is passed through unchanged. File not synced.	Path is passed through. File sent, ignored by client.
Client (ON)	Path reset to EDF. File not synced.	Path reset to EDF. File synced to EDF.

**Client to Server:** this table displays the end result at the server database.

	Client (OFF)	Client (ON)
Server (OFF)	Path is passed through unchanged. File not synced.	Path is passed through. File sent, ignored by server.
Server (ON)	Path reset to EDF. File not synced.	Path reset to EDF. File synced to EDF.
